

Figure D — representative cases, original vs corrected reconstruction (s3c_closing__r_0.6mm). Rows are prespecified selection categories, successes and failures alike.

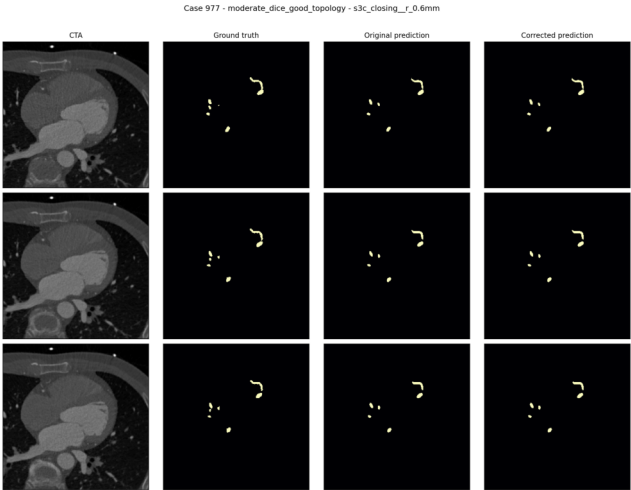

Case 984 — High Dice / high fragmentation
components 31→13 Dice 0.826→0.827 cIDice 0.891→0.897 surface Δ 0.099 mm

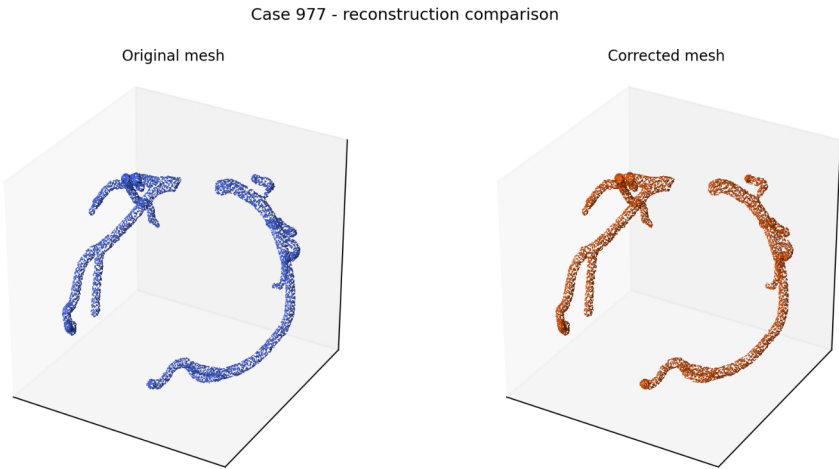

original vs corrected mesh

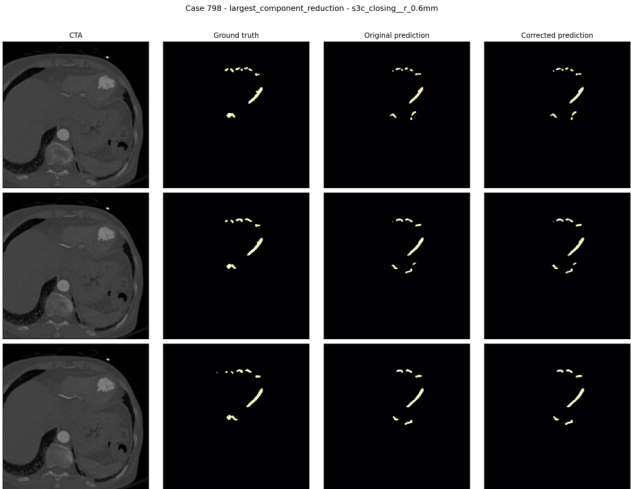

Case 977 — Moderate Dice / good topology
components 2→2 Dice 0.848→0.847 cIDice 0.952→0.953 surface Δ 0.001 mm

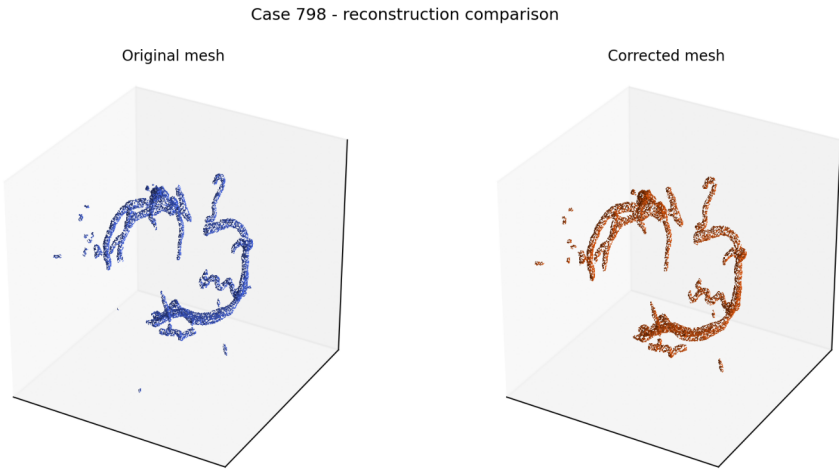

original vs corrected mesh

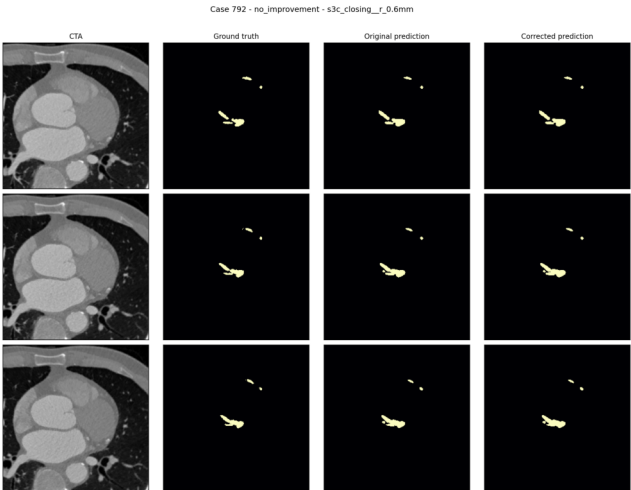

Case 798 — Largest component reduction
components 44→24 Dice 0.664→0.665 cIDice 0.764→0.776 surface Δ 0.062 mm

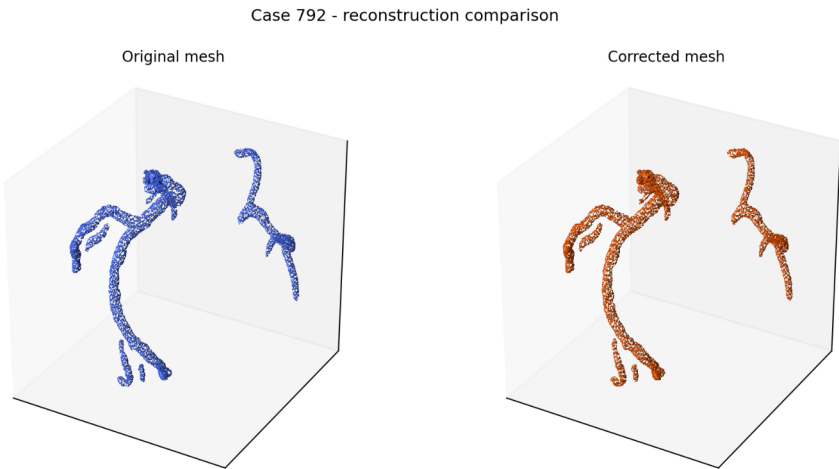

original vs corrected mesh

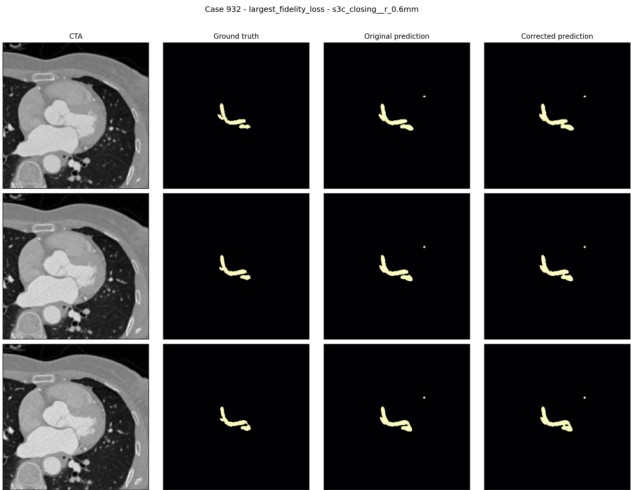

Case 792 — Little or no improvement
components 11→11 Dice 0.815→0.814 cIDice 0.892→0.891 surface Δ 0.002 mm

original vs corrected mesh

Case 932 — Largest fidelity loss (worst case)
components 4→3 Dice 0.820→0.818 cIDice 0.926→0.923 surface Δ 0.006 mm

original vs corrected mesh
